

Industry leader Carrier to be exclusive OEM to offer XDX enhancement package

SPARTANBURG, SC — Carrier Commercial Refrigeration (CCR), the recognized industry leader in the food service, commercial and light industrial refrigeration industry, has partnered with XDX® Innovative Refrigeration to be the exclusive Original Equipment Manufacturer to offer XDX's patented energy-saving and performance-enhancing products.

CCR will make available XDX's X-Stream® and A.R.M.E.D.® technologies in its Beverage-Air, Russell Refrigeration, Cold Zone, Witt Refrigeration, Kramer Refrigeration, Tyler Refrigeration, Kelvinator and International Cold Storage branded refrigeration equipment lines. Equipment from evaporator coils and walk-in storage rooms, to compressorized equipment and food service equipment is available with the patented XDX innovations. The technology is available for nearly every refrigerant and in a wide range of capacities.

CCR is a recognized industry leader in the food service, commercial and light industrial refrigeration industry segments, and provides equipments through various distribution methods. "We are always looking for innovations, such as those from our technology partner XDX, because we are a company that believes that our engineering advancements raise the mark for our competitors, giving us market advantage," said Michael Micak, senior product manager for CCR. "Simply put, Carrier is raising the performance bar."

The heat transfer process through the use of XDX technologies differs from the ordinary inefficient direct-expansion feed of a Freon-type refrigerant system in several ways. The process uses a special valve to allow a thin coating of refrigerant to line the entire inside of the evaporator tubing, resulting in rapid removal of heat from the product or conditioned space. Temperatures improve, the system runs less and equipment performs better in this controlled manner of refrigerant feed.

"Food service is an industry segment that has been hard-hit during recent turns in the economy," said Phil Metz, national accounts manager for the Beverage-Air division. "our focus is to help our customers return to profitability through advanced engineering and through improving our customers' soft costs. Inability to control soft costs often teaches hard lessons."

XDX Innovative Refrigeration is committed to leveraging its industry-leading technology to help customers reduce energy and maintenance costs, increase food safety and meet environmental initiatives. Celebrating its 10th anniversary in 2009, the firm is based in suburban Chicago. Our award-winning and scientifically proven technologies have been installed by a multitude of clients in dozens of industries, including HVAC, foodservice, medical, entertainment, food manufacturing, hospitals and healthcare facilities, schools, colleges and universities.
